WELCOME to MAGNOLIA, the Mississippi Alliance for Gaining New Opportunities Through Library Information Access.

MAGNOLIA is a statewide consortium funded by the Mississippi Legislature which provides online research databases for publicly funded K-12 schools, public libraries, community college libraries, and university libraries in Mississippi.

MAGNOLIA began in 1997 when Mississippi legislators appropriated $568,000 to purchase online databases for publicly funded libraries in Mississippi. Senator Grey Ferris of Vicksburg was instrumental in bringing this project to the legislature. The legislature continues to fund MAGNOLIA even after 15 years. With funding now exceeding $1.2 million, MAGNOLIA databases are being used by libraries and the citizens of Mississippi.

The MAGNOLIA databases have been of great benefit to Mississippi residents since August 1997. In addition to searching the databases in libraries across the state, individuals can also access the electronic resources available through MAGNOLIA from their home or office computers. Interested individuals should contact their local library for the necessary location ID and/or password.

MAGNOLIA News

07/11/2010: MAGNOLIA Update --

Previously the MAGNOLIA Steering Committee reported that MAGNOLIA had suffered a decrease in its budget from the Mississippi Legislature. Since that time, the Committee has been working with several libraries and entities around the state to identify funding to maintain some of the MAGNOLIA resources.

OLLC WorldCat: We are very fortunate that Sherman Smith, Executive Director, Mississippi Library Commission, proposed to the MLC Board (and they accepted the proposal) that LSTA funding be used to pay the subscription to OCLC WorldCat. Therefore, all libraries will continue to have access to the OCLC WorldCat resources through MAGNOLIA.

CREDO REFERENCE: Likewise, several libraries and entities provided the necessary funding to keep the CREDO Reference database.

Contributors include:

- MELO (the Community College Virtual Library),
- Mississippi Library Commission,
- Mississippi State University,
- University of Southern Mississippi,
**Database Highlight**

Credo Reference continues to update its content. When new materials are added, we'll highlight some of the new reference titles you have available to your library.

CredoReference provides an online ready reference collection that includes hundreds of encyclopedias, dictionaries, handbooks, directories, and other reference resources. Here are some of the latest titles added to the CredoReference collection.
MSU Tutorials

The following tutorials have been developed by the staff at the Mississippi State University Libraries in support of MAGNOLIA.

- Middle Search Plus
  The Middle Search Plus tutorial is no longer maintained. For current tutorials for MAGNOLIA K-12 databases from EBSCO, see the “EBSCO Online Tutorials” link below.

K-12 ACCESS FROM HOME

In order to comply with the license agreements with various database providers we have implemented a new method of verifying that only the K-12 school libraries have access to the MAGNOLIA database products.

In the blank below, please input your Username.

If you are denied access and are a K-12 school library please complete the this form.

Searchasaurus®

Three popular primary education databases (Primary Search®, Middle Search® Plus and Book Collection: Nonfiction™) can be accessed via Searchasaurus®. EBSCO Publishing’s user search experience for users in primary education.

Searchasaurus is an exciting and easy way for young researchers to experience online searching. It is an animated interface with a dinosaur theme that encourages students to enhance and develop basic search methodologies. Students will be riveted by the colorful, animated interface, complete with erupting volcanoes and a dinosaur guide, as they gather information on a wide range of topics. Searchasaurus offers Lexile limiters (reading level), making it easy for students to read and research only appropriately challenging materials.

Younger researchers may also utilize the Kids Search interface.

The following databases are available via the Searchasaurus Interface:

**Home Page Search:**
- Book Collection: Nonfiction
- Image Collection
- Middle Search Plus
- Newspaper Source
- Primary Search
- TOP/Search

**Teacher Resources Search Screen:**
- Academic Search Elite
- Education Research Complete
- ERIC
- Professional Development Collection

EBSCO has created a search interface designed specifically for secondary education students, according to their needs and search abilities. The Student Research Center provides students in secondary education with the most appropriate research tools for easily obtaining the information that they seek from their EBSCO databases.

Through the Student Research Center, users can easily predetermine which content sources (e.g., Magazines, Newspapers, Biographies, Country Reports, Film & Video) will be included with their search. They can also search their databases by topic heading, make use of an online dictionary and encyclopedia, explore the top searches of the day, and even limit their search according to appropriate Lexile reading levels.

Some databases may include Lexile reading levels in article citations. The Lexile level assigned to a result provides educators with an estimate of the reading difficulty of the result, and the approximate grade level reading ability required for comprehension. The grade level does not necessarily reflect a student's actual grade.

Periodic Table of the Elements

The American Heritage® Dictionary of the English Language, Fourth Edition. Copyright © 2000 by Houghton Mifflin Company. Published by the Houghton Mifflin Company. All rights reserved. Other important information.
The periodic table arranges the chemical elements in two ways. The first is by atomic number, starting with hydrogen (atomic number = 1) in the upper left-hand corner and continuing in ascending order from left to right. The second is by the number of electrons in the valence shell. Elements having the same number of electrons in the valence shell are placed in the same column. Since the number of electrons in the valence shell is large, the chemical nature of an element, elements in the same column have similar chemical properties.

The arrangement of the elements was devised by Dmitri Mendeleev in 1869, before many of the elements were known. Mendeleev predicted the existence of undiscovered elements. The table has been periodically revised, to accommodate new elements as they were discovered. The current form of the periodic table includes 118 elements.

The elements are divided into several groups and periods, with each group and period having its own characteristics. The groups are numbered from 1 to 18, with elements in group 1A (alkali metals) being the most reactive and those in group 8A (noble gases) being the least reactive.

The periodic table also includes the lanthanides and actinides, which are elements with atomic numbers greater than 57 and 89, respectively. These elements are located in the middle of the periodic table and have similar chemical properties.

The table also includes a periodic table of the elements, which lists all known elements, their atomic numbers, symbols, and atomic weights. This table is useful for identifying the elements and their properties.

The periodic table is a valuable tool for chemists and scientists, as it helps them understand the behavior of elements and their compounds. The periodic table is used in many areas of science, including chemistry, physics, and biology.

3. **Disaster Capitalism.**

Worried about climate change? Have no fear, the planet is getting colder at least according to some. This is more than speculation by skeptics: According to the World Meteorological Organization, global average temperature spiked in 1998 and has been in a cooling trend since then. Sure, 2008 was the 10th-warmest year on record since 1850, but if climate change is really happening, then shouldn’t 2008 have been warmer than 1998? After all, greenhouse gas concentrations in 2008 were at an all-time high. If you work in the fields of climate or weather, chances are you have heard this argument before.

Global cooling has received a lot of attention recently, in the press as well as in scientific and political circles. While thousands of scientists diligently study climate change, a backlash has developed that attempts to contradict the consensus of organizations such as the Intergovernmental Panel on Climate Change (IPCC), the National Academy of Sciences, the American Geophysical Union, and the American Meteorological Society. This backlash does not simply contend that these scientific organizations and the thousands of scientists that populate them are wrong, but that they actually have everything backwards. Those of people using aerosol spray cans could create a hole in the earth’s protective ozone layer and expose all of humanity to increased cancer risks, then surely all of the pollution pumped out of smokestacks and tailpipes could pose global environmental problems as well. By 1990, however, the public and press frenzy that accompanied Hansen’s testimony was widely viewed as overblown. Congress decided to pump new money into climate research, and scientists have been investigating the potential problem ever since, with the vast majority of scientists asserting, with ever greater confidence, that mankind is warming the planet through deforestation and our emissions of greenhouse gases from cars, smokestacks, and landfills.

Concurrently, a small but committed cadre of scientists, politicians, pundits, and interest groups has been levying attacks at the scientific consensus. These scientists, led by S. Fred Singer, professor emeritus of environmental science the University of Virginia, held their own International Conference on Climate Change in 2008 and twice in 2009, leading to the formation of the Nongovernmental International Panel on Climate Change (NIPCC), which released the 2008 report Nature, Not Human Activity,Rules the Climate. In his preface to the report, Singer states “Of the most important issues, the IPCC’s..."
Last year, Beluga Shipping discovered that there’s money in global warming.

Beluga is a German firm that specializes in “super-heavy lift” transport. Its vessels are equipped with massive cranes, allowing it to load and unload massive objects, like multiton propeller blades for wind turbines. It is an enormously expensive business, but last summer, Beluga executives hit upon an interesting way to save money: Shipping freight over a melting Arctic.

Beluga had received contracts to send materials on a sprawling trip that would begin in Ulsan, South Korea, and head to the Russian port city of Archangelsk, located near the border with Finland. Normally, this trip requires Beluga’s ships to navigate an 11,000-mile route around the south of India and through the Suez Canal. But in 2008, its executives decided that global warming had eroded the Arctic’s summer sea ice significantly enough that their ships could travel the Northeast Passage along the north coast of Russia. Previously, a cargo ship could only safely navigate that route if an icebreaker went ahead, smashing a route through thick ice.

Now, a warming climate had—for six to eight weeks beginning in July—transformed the route into mostly open water, studded with ice floes that the Beluga ships could navigate. So the executives got permission from the Russian government to travel along the coast, paid a transit fee of a “comparably moderate five-digit figure,” and sent two ships on their way. Four months later, they’d finished the trip. Compared with the old Suez Canal journey, this shorter route saved an enormous pile of money: it cost $200,000 less per ship in fuel and bunker costs. Global warming had boosted the company’s revenues by more than half a million dollars in one year alone.

When I interviewed Beluga CEO Nils Stølhjem via email this spring, he said he envisions using the Northeast Passage regularly. Instead, he’s planning...

Storm prey (May 2010)

Author: Sandford, John, 1944 Feb. 23-

Series: Prey series 20

Description: Weather Karkinnen, surgeon, wife of an investigator named Lucas Davenport, unwittingly witnesses the robbery of the hospital pharmacy where she works. With the death of a pharmacy worker on their hands, the three thieves set out to find out who Weather is, and eliminate the only possible witness.

Book Appeal Terms: Definition of Appeal Terms

Genre: Suspense stories

Storyline: Plot-driven

Pace: Fast-paced

Tone: Suspenseful; Violent

Writing Style: Compelling; Gritty; Richly-detailed

It was an inside job, and it should have been easy. Rob the pharmacy at Minneapolis’ largest hospital. in, out, wait till things cool down, and then sell the drugs for a half million or so. But the old man had to be a hero. Who knew he’d be on blood thinners and die after he was kicked? A robbery turned murder means Lucas Davenport and his Bureau of Criminal Apprehension team are called in to assist the investigation. There’s another element to the case for Davenport: his wife, Weather, a surgeon at the hospital, may be able to identify one of the killers. The case starts to escalate. An attempt is made on Weather’s life. The bodies of two motorcycle gang members are found in a rural area. Davenport guesses the gang is trying to pressure and murder its members. Weather, under 24-hour guard, is part of a surgical team working to separate conjoined twins in a procedure that’s captured the attention of the world’s media. Meanwhile, Davenport and his team keep finding bodies of likely robbers but can’t seem to isolate either the brains behind the theft or the hospital insider who pointed them at the pharmacy. The twenty-second Prey novel includes most of the elements readers expect: sharp plot, snappy dialogue, and action-packed story. But the background playfulness and gawky humor that usually fill in the gaps are in short supply. But hey, that’s nitpicking. On balance, this is another fine entry in a wildly popular series. -- Lukowicz, Wes (Reviewed 03-15-2010) (Booklist, vol 106, number 14, p6)

Publishers Weekly:

"Starred Review" At the start of bestseller Sandford’s superb 20th Lucas Davenport thriller, the getaway vehicle from a botched early morning robbery, which results in a pharmacy employee’s death, almost collides with the car driven by Lucas’s surgeon wife, Weather Karkinnen. Weather, who was on her way to work at the Minnesota Medical Research Center, becomes a key witness. Sandford masterfully handles both sides of the equation as the thieves—planner Lyle Mack, his brother, Joe, and their henchmen—work to cover their crime. The investigation belongs to Minneapolis’s deputy chief, Marcy Sherrill, but Lucas of the Minnesota Bureau of Criminal Apprehension pulls out all the stops to protect his wife. Sandford creates additional drama throughout as Weather and a skilled team of doctors perform an operation to separate twins joined at the skull. Sharply drawn characters, intricate plotting, and smooth dialogue make this a sure-fire winner. 500,000 first printing. Author tour. (May) --Staff (Reviewed March 15, 2010) (Publishers Weekly, vol 257, issue 11, p36)

Library Journal:

In his 20th Prey novel, Sandford continues to deviate from the pulse-pounding serial killer thrillers of the early 1990s that put Minneapolis cop Lucas Davenport on the map. Davenport still has his sharp mind, quick reflexes, and dirty mouth, but now marriage and fatherhood give him something to lose. As head of Minnesota’s Bureau of Criminal Apprehension, he’s working with a larger cast of law enforcement agents and a wider variety of criminals. The morning that his wife, surgeon Weather Karkinnen, is set to separate conjoined twins, she sees a man who just robbed the hospital pharmacy. Davenport calls Virgil Flowers to protect Weather and help him catch the robbers before they can identify her as the witness. The bikers behind the drug heist are portrayed as petty criminals, but the doctors and man they’re working with are slowly revealed as out-and-out sociopaths. VERDICT This fast-paced crime novel with bad guys so callously amoral will have readers dead-bolting their doors for weeks. [See Prepub Alert, LJ 1/10.]—Karen Klockner, Deerfield P.L., IL —Karen Klockner (Reviewed April 15, 2010) (Library Journal, vol 135, issue 7, p77)

Kirkus:

Despite its inaccurate, generic and dumb title—what’s next, Murder Prey?—Lucas Davenport’s 20th case is one of his best. “We don’t hurt anyone,” Lyle Mack tells his brother Joe and their biker buddies Mikey Haines and Shooter Chapman as he conducts one last on-site review of their plans to rob the pharmacy in the Minneapolis Medical Center. But despite the thieves’ success, Haines’s temper gets away from him, and he locks pharmacist Don Peterson to death. Even worse, their car is spotted by a witness who gets a good look at Joe as they’re leaving the parking garage. Worst of all, the witness is Dr. Weather Karkinnen, a reconstructive surgeon who goes home each night from her demanding job—which includes surgery to separate a pair of 18-month-old twins joined at the head—to the arms of Lucas Davenport, her husband. Since the cops have one way of identifying Haines, whose victim managed to get some of his killer’s blood under his fingernails before he bled out, and another of identifying Joe, the conspirators have every incentive to cut tolltale ends short, even if those tolltale ends include each other. None of them is very smart, and Minnesota’s Bureau of Criminal Apprehension would probably have them under lock and key by nightfall if they only stood pat. Instead, however, Lyle calls on Cappy Garner, a friend with some experience as a hit man even though he’s not old enough to buy a beer, and then the fireworks begin. By the time Sandford calls it quits, eight more cast members will be dead, and virtually all the survivors will have been stalked, chased, shot at or otherwise menaced by all manner of tough guys. And by the time those two twins are finally separated, the one new relationship that will have blossomed is an unlikely friendship between an aspiring killer and his mentor. Razor-sharp dialogue, a tautly controlled pace and enough homicides for a miniseries. What more could fans want? (Kirkus Reviews, March 15, 2010)
Series Title: Prey series

Also Known as: Lucas Davenport novels

Series Author: John Sandford

Description: (First book in series) Lieutenant Lucas Davenport is determined to track down a diabolically clever serial killer who leads a double life, carefully picks out his female victims, and taunts the police with notes signed "Maddog".

The Absolutely True Diary of a Part-Time Indian
Arnold "Junior" Spirit lives on the Wellpinit reservation with his parents and sister.

The Accidental Tourist
The Accidental Tourist has a relatively simple plot, told at a leisurely pace....

Accordion Crimes
Accordion Crimes traces the movements of a handmade accordion across time and geography and ethnicity, from its creation by a Sicilian artisan in 1890 to its eventual demise beneath the wheels of a Florida truck in 1996....

The Age of Innocence
Book One begins in the 1870s at the opera....

Ahab's Wife or the Star Gazer
Ahab's Wife derives its story from several brief references in Melville's Moby Dick to the wife who Captain Ahab left behind in Nantucket when the Pequod sailed on its final voyage....

Alfred and Emily
A fictionalized memoir side by side with a historical one, Alfred and Emily explores the lives of Lessing's parents, both as they might have been and as they were. The first part of the book is the fictional account, set in England and imagining how their lives might have been if the Great War had not taken place. The second part is realistic, as Lessing recalls their childhood and youth with her family in Southern Rhodesia.

Alias Grace
Grace Marks was arrested in 1843, while only 16, as an accomplice to the brutal double murders of her employer Thomas Kinnear and his housekeeper Nancy Montgomery.

All Roads Lead Me Back to You
When the quarter horse mare turns up in her barnyard, saddled, lame, and riderless, in the bitterly cold aftermath of a winter blizzard, Alice Anderson holds little hope that the
Title: Agatha Awards: Best Novel

Document Type: Award Winners

Description: Since 1999, Malice Domestic Ltd. has conferred this award, which is named after their inspiration, Agatha Christie. Novels that receive consideration usually feature an amateur detective, and contain no explicit violence or sex. Winners are announced at the Malice Domestic convention held each year in April or May.

Apple Inc.

Company Profile

Publication Date: 21 May 2010
SWOT ANALYSIS

Apple designs, manufactures, and markets personal computers (PCs), mobile communication devices, and portable digital music and video players. The company also offers a variety of related software, services, peripherals and networking solutions. The company also provides online distribution of third-party music, audio books, music videos, short films and television shows. The company has a strong brand image, which enables it to command a premium price for its products and gives it an edge over regional as well as global competitors. However, intense competition threatens to erode the company’s revenues and profitability in long term.

Strengths

Strong brand image

The Apple brand is well recognized amongst most consumers. Apple’s products enjoy a high level of brand awareness and brand recognition throughout all its markets. Moreover, the company’s brand ranking, as per Interbrand, has been improving in recent years. Its brand ranking improved to 20th position in 2009 from 24 in 2008 and 35 in 2007. Apple’s brand value improved to $15,433 million in 2009 from $13,724 million in 2008 and $11,037 million in 2007.

Apple leverages its brand image to differentiate its product offering and drive sales. The company’s strong brand enables it to command a premium pricing and create significant demand for its products such as Mac, iPod, iPhone and iPad. For instance, the company sold 300,000 iPads on the first day of its launch in the US in April 2010. Strong brand image gives the company an edge over regional competitors and other global competitors such as Sony.

PHENOMENAL WOMAN

Pretty women wonder where
my secret lies.
I'm not cute or built to suit a
fashion models size
But when I start to tell them,
They think I'm telling lies.
I say,
It's in the reach of my arms,
The span of my hips,
The stride of my step,
The curl of my lips.
I'm a woman
Phenomenally.
Phenomenal woman.
That's me.

I walk into a room
Just as cool as you please,
And to a man,
The fellows stand or
Fall down on their knees.
Then they swarm around me,
A hive of honey bees.
I say,
It's the fire in my eyes,
And the flash of my teeth,
The swing in my waist,
And the joy in my feet.
I'm a woman
Phenomenally.
Phenomenal woman.
That's me.
**Merriam-Webster's Encyclopedia of Literature**

*Merriam-Webster's Encyclopedia of Literature* is an excellent and comprehensive resource providing information about all of the world's literature. Formatted as a combination dictionary-encyclopedia, it is user friendly, presenting detailed, up-to-date entries for literary terms and vocabulary as well as information about authors and works. A perfect companion to the study of literature for students and scholars as well as literature lovers, the encyclopedia also offers plot summaries and a listing of literary characters. *Merriam-Webster's Encyclopedia of Literature* offers other features as well, including pronunciation information, etymologies of literary terms and listings of literary prizes. The text provides over 10,000 entries and includes 250 illustrations.

**Bloomsbury group** Name given to a coterie of English writers, philosophers, and artists who frequently met between about 1907 and 1930 at the houses of Clive and Vanessa Bell and of Vanessa’s brother and sister Adrian and Virginia Stephen (later Virginia Woolf) in the Bloomsbury district of London, the area around the British Museum. They discussed aesthetic and philosophical questions in a spirit of agnosticism and were strongly influenced by G.E. Moore’s *Principia Ethica* (1903) and by A.N. Whitehead’s and Bertrand Russell’s *Principia Mathematica* (1910–13), in the light of which they searched for definitions of the good, the true, and the beautiful and questioned accepted ideas with a “comprehensive irreverence” for all kinds of sham.

Nearly all the male members of the group had been at Trinity or King’s College, Cambridge, with Thoby Stephen, who had introduced them to his sisters Vanessa and Virginia. Most of them had been “Apostles,” or members of the “Society,” a select, semisecret university club for the discussion of serious questions, founded at Cambridge in the late 1820s by J.F.D. Maurice and John Sterling.

The Bloomsbury group included the novelist E.M. Forster, the biographer Lytton Strachey, the art critic Clive Bell, the painters Vanessa Bell and Duncan Grant, the economist John Maynard Keynes, the Fabian writer Leonard Woolf, and the novelist and critic Virginia Woolf. Other members were Desmond MacCarthy, Arthur Waley, Saxon Sidney-Turner, Robert Trevelyan, Francis Birrell, J.T. Sheppard (later provost of King’s College), and the critic Raymond Mortimer and the sculptor Stephan Tomlin, both Oxford men. Bertrand Russell, Aldous Huxley, and T.S. Eliot were sometimes associated with the group, as was the economist Gerald Shove. The group survived World War I but by the early 1930s had ceased to exist in its original form, having by that time merged with the general intellectual life of London, Oxford, and Cambridge. Although its members shared certain ideas and values, the Bloomsbury group did not constitute a school. Its significance lies in the number of talented persons associated with it.

January 11, 1944 Address of President Franklin D. Roosevelt

01/11/1944

Ladies and gentlemen:

Today I sent my Annual Message to the Congress, as required by the Constitution. It has been my custom to deliver those Annual Messages in person, and they have been broadcast to the Nation. I intended to follow this same custom this year. But, like a great many other people (of my fellow countrymen), I have had the "flu" and, although I am practically recovered, my Doctor simply would not permit me to leave the White House to go up to the Capitol.

Only a few of the newspapers of the United States can print the Message in full, and I am anxious that the American people be given an opportunity to hear what I have recommended to the Congress for this very fateful year in our history — and the reasons for those recommendations. Here is what I said: This Nation in the past two years has become an active partner in the world's greatest war against human slavery.

We have joined with like-minded people in order to defend ourselves in a world that has been gravely threatened with gangster rule.

But I do not think that any of us Americans can be content with mere survival. Sacrifices that we and our Allies are making impose upon us all a sacred obligation to see to it that out of this war we and our children will gain something better than mere survival.

We are united in determination that this war shall not be followed by another interim which leads to new disaster — that we shall not repeat the tragic errors of ostrich solatism.

Agriculture and Pollution

1.1
SETTING THE SCENE

During the latter half of the twentieth century, the global human population doubled from less than 3000 million to 6000 million. As the global population increases, demand for food continues to rise. This leads to the intensification of agriculture which in turn places increasing demands on the natural environment (Brown et al., 2000).

Agriculture is of fundamental importance to any national economy and the lifeblood of rural communities throughout the world. It occupies 35% of the world’s land surface with 11% under direct cultivation and 24% managed as permanent pasture (UNEP, 1992). In the United Kingdom more than 76% of land is under agricultural production (MAFF, 2000a). The first evidence of agricultural activity in the UK can be traced back to 5000 BC (Reed, 1990), although our book is concerned with changes occurring only in the last 70 years or so. The UK agricultural industry has undergone a major revolution since the 1930s; progress in animal and crop breeding, the availability of pesticides and fertilisers, and ever-advancing technology has resulted in a substantial increase in productivity and levels of national self-sufficiency.

Successive government policies, notably the farm support measures of the Agriculture Act 1947...
Agricultural Pollution: Environmental Problems and Practical Solutions (Spon’s Environmental Science and Engineering Series) [Paperback]

Reference Entries

Global Warming in Science in the Contemporary World: An Encyclopedia

The greenhouse effect, the average temperature on Earth would be about −18 degrees Celsius (0 degree Fahrenheit). By the end of the century, global warming... to 1.260 parts per million. The scientific effort to understand global warming has encouraged paleoclimatological studies to determine past climate.

Climate warming on a global scale, usually attributed to an enhanced greenhouse effect. There is no doubt that the temperature of the Earth has... cause of recent global warming. The link between these two phenomena is explored by mathematical models of the energy balance of the Earth's surface.

Global Warming in Philip's Encyclopedia 2008

For industrial nations to cut industrial emissions that cause global warming, global warming 1550 1600 1650 1700 1750 1800 1850 1900 1950 2000 2050... solar... to Earth (4). This is known as the greenhouse effect because the gases act like the glass of a greenhouse. On a global scale.
Global Warming

Increase in average global temperature, amounting to approximately 0.74°C/1.3°F from 1905 to 2005. Much of this is thought to be related to human activity. Global temperature has been highly variable in Earth history and many fluctuations in global temperature have occurred in historical times, but this most recent episode of warming coincides with the spread of industrialization, prompting the suggestion that it is the result of an accelerated greenhouse effect caused by atmospheric pollutants, especially carbon dioxide gas. The melting and collapse of parts of the Larsen Ice Shelf, Antarctica, in two distinct events in January 1995 and February 2000, have been attributed to global warming, as has the reduction in the Arctic polar ice cap. Melting of land-based ice is expected to raise the sea level in the coming decades (melting of floating ice does not alter sea level).
